PROJECTS

Waka — Crowdsourced Nigerian Fare Tracker

A crowdsourced fare-tracking platform that helps Nigerian commuters check real-world transport fares before boarding buses, danfos, keke, and BRT.

- Designed and developed the web application from concept to deployment.
- Built a platform for commuters to submit and discover real-world transport fares.
- Focused on mobile responsiveness and a simple user experience.
- Designed the product around a real-world problem affecting commuters in Nigerian cities.
- Deployed the application using Vercel.

Live Project: <https://waka-eight.vercel.app/>

Beacon — Browser-Based Phone Finder

A browser-based find-my-phone tool that allows users to connect a device and view its location from another browser without requiring an app-store installation.

- Designed and developed the application from concept to deployment.
- Built a device connection and tracking workflow using browser-based technology.
- Created an interactive map interface for viewing device location.
- Designed the application to work across Android and iOS devices through the browser.
- Focused on creating a simple and accessible experience without requiring a native mobile app.
- Deployed the application using Vercel.
